## Executive Summary

The following market analysis represents the beginning of an effort to understand how to facilitate business growth in the Farmville area, with a specific focus on downtown. The study team collected and analyzed 1217 consumer surveys, 385 intercept surveys, and 72 business owner surveys as part of this process. Additionally, the team collected secondary data on population and business trends in the area to verify and support the survey process. Details on these findings are enclosed.

In summary, the market analysis project highlighted the following items for consideration in the planning process:

- The trade area for the study was primarily local. There is opportunity to increase shopping traffic and business opportunities by coordinating consumer data collection efforts with other organizations. The result would be a consumer database and marketing plan for more far reaching trade areas.
- Consumers want variety in shopping and dining options downtown. Frequently they go out of town for variety. They also prefer shopping after 5 p.m. and go elsewhere to be able to do so.
- With the exception of variety, green space, hours, and parking, the overall environment downtown meets or exceeds the expectations of consumers. Upon further study of questions regarding parking, most respondents indicated that they were able to park at most 1 block away from their destination, and most are able to secure parking on the street or in the municipal lots.
- Businesses were overall very positive in their assessment of their business growth over the last year and their expectation for the future.
- Many businesses are reluctant to open past 5 p.m.
- Many businesses believe that recruitment of similar businesses would be harmful to their business growth.
- A building inventory completed by Longwood University (Longwood) students is available and should be utilized to plan complementary clusters of businesses in the recruitment process.
- Marketing opportunities for Farmville and Downtown Farmville include cooperation with event planning at Longwood and Hampden-Sydney College (Hampden-Sydney) to capitalize on events and traffic that businesses find beneficial.
- Coordination with organizers of locally hosted events such as First Fridays and Heart of Virginia Festival, both very popular with consumers, would assist in making the events beneficial to businesses as well.
- Data collection from consumers (zip code, e-mail, etc.) is inconsistent among businesses. Planning and coordinating data collection would assist in marketing the area to consumers. An important component to business promotion is the usage of the web and social media.
- A majority of students indicate that downtown housing would be an attractive option to them.

The highlights above are intended to be used as a starting point in furthering the business development of the downtown area. It will be important to consider development as a team activity, and to include all key parties in the planning process. In addition, recommendations that follow in this study are discussion points only and should not limit discussion and consideration of other ideas. What has been
presented in this document includes what is apparent given a short time period of data collection and analysis. There may be additional discussion points that arise from further review of the data and the following study. Additional discussion is encouraged and the Longwood Small Business Development Center (LSBDC) staff will assist in interpreting the necessary data.

## I. Background Information

On August 16, 2010, The Farmville Area Chamber of Commerce hosted a roundtable meeting of merchants and citizens who were interested in furthering business development in Farmville. The meeting was held in J. Ferguson Gallery on Main Street with a two-fold objective: to support local small businesses and to encourage discussion regarding the issues main street businesses are facing. Citizens and business owners alike expressed concern about empty storefronts, building upkeep, the effect of the economy on smaller businesses, the ability to attract business to the downtown area, and the need to more effectively capitalize on the student and faculty market at both Longwood University and Hampden-Sydney College. Discussion quickly evolved around the need for more focused development in downtown.

As a result of the roundtable, several citizens and business owners signed up to participate in a more formal committee to address the positive development of the downtown area. Now co-chaired by Dr. Charles Ross, Dean of Longwood University’s College of Arts and Sciences and Jimmy Johnson, coowner of the Sleeping Bee on Main Street, the group has evolved into an independent organization with 12 board members and four committees with participation by over 40 community members as well as student organizations.

Downtown Farmville, Inc., while not yet a member of the Virginia Main Street Program, has strived to follow the proven principles of the Main Street Program in terms of committee structure and operations. The four primary committees are Economic Restructuring, Promotion, Organization, and Design. A chairperson who is a board member of Downtown Farmville, Inc. leads each committee and recruits citizens and student teams to assist in committee objectives.

The Economic Restructuring Committee is responsible for helping downtown businesses expand and assisting in the recruitment of new ones. As part of this effort, it is extremely important to understand the market conditions of the area, the trade area for Farmville, the consumer base that currently patronizes the downtown area, and the retail sales potential for both new and existing businesses. A market analysis of the area would begin to provide this information.

The LSBDC worked with the Economic Restructuring Committee to design and conduct a market analysis of Farmville. In order to maximize resources committed to such an endeavor, the LSBDC developed the study in such a way as to provide information on Farmville in general as well as information necessary for specific downtown development. The information from the study will be available to planners, economic developers, tourism boards, etc. in addition to downtown Farmville and would help align efforts of all involved in furthering a cohesive plan of development. The market analysis is only the beginning of a process that will uncover opportunities for partnerships in the development of downtown as well as the Farmville area in general. Suggestions on immediate opportunities are included under Section IV - Significant Findings and Principles for Ongoing Development.

## II. Study Objectives and Methodology

The Market Analysis process began with the design of survey instruments to collect information from consumers in Farmville. LSBDC staff and interns researched studies from other communities in the U.S. as well as those within Virginia and interviewed economic developers and others involved or interested in downtown development. The process resulted in development of three distinct survey instruments: an online consumer survey, a consumer intercept survey, and a business owner survey.

## Consumer Survey

The consumer survey was placed online on the LSBDC website. The survey included questions on shopping habits, how often the respondent patronized downtown as opposed to other areas, why they shopped in certain areas, perceptions regarding their shopping experience, what would encourage them to visit downtown more often, their opinions regarding needed businesses, and demographics regarding income and household statistics. A copy is available in the appendix. LSBDC staff created an invitation card with the web address and description of the study, a statement of its importance, as well as an incentive for completion. Each person who completed a survey and provided their e-mail address was included in a random drawing for three $\$ 100$ VISA gift cards. The invitation cards were printed at Longwood, and merchants throughout Farmville were encouraged to hand customers an invitation card and ask them to please help us to enhance their future experiences in Farmville. The survey was officially deployed and invitation cards in place with merchants on November 16, 2010 in time for the peak holiday shopping season. In addition to invitation cards handed out at businesses, the Town of Farmville included an invitation in each water/sewer bill that was mailed in February. The Farmville Herald ran articles about the study, and WFLO, Farmville’s local radio station, ran informational announcements and interviews throughout the survey period.

The survey remained live with active promotion through April 25, 2011. One thousand two hundred seventeen (1217) surveys were completed and submitted. Those who did not have Internet access could request a paper copy of the survey. Those surveys were entered into the system by LSBDC staff and included in the analysis.

## Intercept Survey

To further enhance collection and to engage shoppers and visitors in person, LSBDC staff developed a consumer intercept survey. The brief survey had several key questions relevant to the larger online survey for comparison purposes. Alpha Phi Omega, Longwood’s service fraternity, volunteered time during four Saturdays to interview shoppers in several areas of Farmville. Students were trained and interviews were conducted in three locations on Main Street, along with locations at Belk and Kroger on South Main Street, and McDonalds, located at the beginning of the historic district. Students also conducted intercept surveys on Longwood's Brock Commons. Three hundred eighty five (385) intercept surveys were collected. A copy of the survey is included in the appendix and information from the intercepts is added to the analysis of the consumer surveys where relevant.

## Business Owner Survey

Input from the business owners is essential in analyzing the health and marketability of an area as well as in planning for business growth. LSBDC staff and students visited and personally collected 72 surveys from retail, service, and restaurant business owners located on or nearby Main Street. Survey
questions included demographic information on type and size of business as well as questions on sales patterns, business hours, target market, promotional activities, and perceptions on the business environment and the needs within their business. A copy of the survey is included in the appendix.

## Secondary Research

Section III of this report includes additional secondary information regarding business and resident demographics to help support and clarify decisions and assumptions moving forward. Sixty-six percent ( $66 \%$ ) of respondents to the consumer survey reside in either Farmville or Prince Edward County, representing a very local trade area. This percentage includes students who selected their residence as Farmville. Therefore, secondary data reports for comparison thus far include only Prince Edward and Farmville. As additional trade areas are defined, further reports are readily available through the LSBDC for analysis.

## General Objectives

This Market Analysis report seeks to answer the following questions. Where answers are not clear, recommendations are made regarding additional steps to help find solutions.

- What is the trade area for Farmville?
- What are the perceptions of consumers who visit Farmville?
- What types of businesses should be recruited?
- What activities and events could assist in business development?
- What are effective means of promoting events in our market?
- Is there a market for downtown housing?

## III. Secondary Information

The following reports include demographic and market information helpful in the comparison of survey responses to actual and estimated consumer activity in the market area. Sources of data include ESRI, Inc. and the Town of Farmville. ESRI data on retail expenditures is based on information collected by the Bureau of Labor Statistics through National Consumer Expenditure Surveys. Full reports are available in the appendices.

## Comparison of Secondary and Primary Sources - Initial Findings

## Business Summary

ESRI reports that there are approximately 197 retail businesses (including restaurants) and 333 service businesses in the 23901 zip code area. ESRI sources InfoGroup as the provider of this information. The LSBDC surveyed 92 businesses and collected 72 completed surveys. Forty-one (41) or $57 \%$ of returned surveys were from retail or restaurant businesses, representing $20 \%$ of that population.

## Income

It is notable that approximately $85 \%$ of both Prince Edward and Farmville households earn less than $\$ 75,000$. Only $51.9 \%$ of respondents to the consumer survey earn less than $\$ 75,000$. Therefore responses are skewed towards higher income demographics within the immediate trade area. This is partially attributable to the survey having been primarily online and to the educational attainment of the respondents.

## Educational Attainment

Respondents to the consumer survey also have a higher level of education than the general population in the immediate trade area. Approximately forty percent (40.2\%) of respondents to the survey have a graduate or professional degree, compared to $11 \%$ of the population in Prince Edward County. Twenty-eight percent (28.4\%) of respondents have a bachelor's degree, compared to $13 \%$ in Prince Edward County.

## Retail Marketplace Profile

ESRI Marketplace Profile Reports contain information estimated from an annual consumer expenditure survey. From this data, ESRI estimates retail "leakage," or the amount of spending that happens outside of the designated trade area due to excess demand versus supply. For purposes of this initial report, the trade area is Farmville and Prince Edward County. Areas of potential leakage noted in ESRI's report include:

- Food and beverage stores, including grocery stores and specialty food stores.
- Health and personal care stores
- Sporting goods
- Miscellaneous store retailers

Caution should be used in evaluating these reports, as regional consumer spending patterns have been generalized to the local population. Local knowledge of the market area and careful comparison to primary data collected as part of the local consumer survey will assist in determining special needs for different shopping areas, such as downtown.

Retail Sales and Dollar Volume
The Town of Farmville publishes retail sales data each year, and the enclosed table covers the previous five years of data. Retail sales grew by $2.42 \%$ from 2009 to 2010, which is the first year of positive growth since 2007. Areas of growth included grocery stores, retail automotive sales, other retail sales, and lodging. Areas of decline included restaurant sales.

## IV. Significant Findings and Principles for Ongoing Development

## Trade Area

The trade area is the geographic area from which an area attracts consumers. Developing knowledge of a community's trade area is important as marketing efforts are developed and targeted. It is also important in the process of targeting new businesses and giving them relevant information on their potential customer base. A community has multiple trade areas represented by different businesses and organizations. Farmville has many different organizations that draw customers from varying distances. For instance, Green Front Furniture may draw shoppers from other states, while High Bridge Rails to Trails may draw outdoor enthusiasts from across Virginia.

A majority of respondents to the online consumer survey (66.6\%) indicated that they reside in Prince Edward or Farmville. Students also tended to answer the survey as Farmville residents (61.6\%), which is consistent with census reporting. For purposes of analyzing this round of survey data, the recommended approach would be to consider the accompanying trade area as "local," encompassing Prince Edward County and Farmville.

There may be several reasons that visitors from outside the local area may have been unlikely to complete an online survey. Active involvement of merchants in promoting the survey and the incentives with the invitation card was essential to the consumer's follow-through in taking the survey. Data shows that only $13 \%$ of respondents referenced having received the invitation card. Consumers from out of town may also have misplaced the card or discarded it with empty shopping bags or paper. Based on the frequency of local response, we can also assume that the appeal of building a better business community resulted in more engagement from local patrons.

While invitation cards proved less effective at gaining visitor input, the intercept survey process did capture information from approximately 114 visitors from out of town. Relevant data from these shoppers is included in the analysis of the online consumer survey.

This study mostly represents the effect of local shopping habits, and it will be important for the community to continue to work towards defining the different market areas that Farmville serves. One recommendation is to seek out data sharing opportunities in regards to non-confidential data such as zip codes. Where possible, downtown Farmville and organizations within the town of Farmville and the County could collaborate on the development of permission based visitor information data collection. This should be part of an overall marketing plan for the Farmville area.

## Consumer Perceptions

Consumers of all types shop less frequently downtown than they shop in other places in Farmville and elsewhere. They tend to go out of town for better selection and variety of products and they shop elsewhere in Farmville due to the availability of extended shopping hours. Students at HampdenSydney and Longwood indicated that the location of downtown is convenient and easily accessible, which will facilitate opportunities for growth in this target market.

Most consumers, whether visitors, students, or residents, indicated that a variety of dining options and entertainment, more variety of retail shops, and extended shopping hours would bring them to
downtown Farmville more often. Many visitors to town, interviewed through the intercept survey process, indicated that more dining options would enhance the Main Street area and their shopping experience. Some top business choices suggested for shopping variety included an ice cream shop, a kitchen supply/gourmet foods shop, and a butcher shop.

The overall environment downtown meets or exceeds the expectations of consumers, with the exception of variety, shopping hours, parking, and green space. Upon further study of questions regarding parking, most respondents indicated that they were able to park at most 1 block away from their destination, and most are able to secure parking on the street or in the municipal lots.

## Current Business Environment and Perceptions

The business environment in the downtown area appears optimistic. Approximately forty-seven percent (46.9\%) of retailers surveyed say that their business has improved over the last year. This is consistent with the reported increase in retail sales in Farmville for 2010. Half of all businesses upgraded their mix of products and services over the last two years. Forty-one percent (41\%) have changed or increased marketing efforts and $45 \%$ have attended seminars or training. Retail and restaurant businesses indicate that they plan to continue focusing on upgrading goods and services and modifying their marketing efforts. Sixty-one percent (61\%) of all respondents plan to expand their operations in the coming year. Businesses remain interested in educational opportunities, with marketing and e-commerce being top choices for continuing education. In terms of infrastructure and facilities, business owners would most like to see development of river access, sports facilities, and downtown housing.

While businesses are generally positive about the environment and atmosphere downtown, there are some possible challenges. According to the consumer surveys, shoppers desire an opportunity to shop after 5 p.m. While $42 \%$ of respondents either already stay open past 5 or would be willing to, $24 \%$ of retailers who responded to the survey indicated that they would not be willing to stay open past 5 p.m. Further consideration and study of these results is recommended to arrive at a successful solution for both businesses and consumers.

A majority of businesses also indicated that addition of similar businesses to the area would impact them negatively. While variety in shops and restaurants is desired, addition of new businesses may appear at first to compete with existing businesses in some way. Careful planning and communication will help in recruiting and locating complementary businesses while encouraging more traffic and therefore, potential growth for all businesses. In terms of business opportunities, business owners indicated that they would like to see an ice cream shop, butcher, kitchen supply, or outdoor recreation business as their first choice(s) of potential recruits. These results are similar to those from the consumer survey.

## Business Recruitment and Retention

The process of building business activity in downtown can be beneficial to existing businesses as well as new businesses. Existing businesses may see opportunities for expansion in the suggestions by consumers and are often more aptly positioned to successfully provide suggested products and services. It may be advisable to work first with existing businesses in the downtown area to provide support and identify opportunities for expansion. Where opportunities cannot be filled internally, new businesses may be recruited to fill the gaps.

Data from the recent building inventory conducted by Longwood students for the benefit of downtown should be combined with market data to identify ideal locations for new businesses. As part of the process, complementary clusters of businesses may be developed in certain areas of Main Street.

The process of business recruitment should be a team effort and should be complementary to the overall development plan for the town and the county. Planners, economic developers, real estate agents, and others should be included in communication and planning.

## Marketing Opportunities for Farmville and Downtown

Forty-seven percent (47\%) of all businesses surveyed and $37 \%$ of retailers felt that local events, such as Longwood or Hampden-Sydney functions do not increase sales volume for their businesses. However, written comments suggest that events that bring parents and visitors to downtown can help to grow their sales. There is opportunity to work with both higher education institutions to coordinate promotions and provide time for visitors to the institutions to explore the downtown area as well as other local attractions.

The Heart of Virginia Festival and First Fridays are very popular among residents as noted on the consumer survey, with most having attended at least one of these. Most businesses noted that events such as Heart of Virginia may actually harm their business rather than help it grow. There is opportunity for more coordination among businesses and the organizers of these events in order to make the event beneficial for businesses while giving local residents additional options to patronize local businesses. As First Fridays is an evening event, more coordination between business owners and organizers of the event may make it possible to build opportunities for businesses to benefit from the additional traffic downtown by coordinating extended hours.

When asked about collection of data from visitors, $50 \%$ of retailers indicated that they do collect data such as e-mails or zip codes. Sixty-three percent (63\%) of service providers collect some form of data. However, $58 \%$ of all businesses surveyed are not willing to share the data. The development of a common, town-wide, permission based contact list would provide opportunity to market Farmville to a wider audience, taking into consideration all of the various trade areas that exist among merchants and tourism based organizations alike. This type of undertaking would require careful coordination of a collection process, but could result in the use of cooperative promotion activities and increased repeat traffic and sales volume. The potential for this type of promotion is reinforced by visitors who completed the intercept survey. Many indicated that they did not know as much as they would like about other shopping options or attractions within the town.

Sixty-five percent (65\%) of all businesses believe that word of mouth is the best way to promote their business. Approximately twenty-nine percent (29.2\%) believe that the web is the best method of promotion. Technology and social media provide opportunities to build upon the effectiveness of "word of mouth" techniques. As more coordinated marketing systems, such as contact lists, are developed for the area, social media tools such as Facebook and Twitter must be considered and used to help spread awareness of businesses and activities. Dedicated staffing and responsibility for this function is often the key to its success.

## Downtown Housing

Over half of Longwood students and one third of Hampden-Sydney students who responded to the consumer survey indicated that they would consider living downtown if housing were available. However, most business owners responding to the business owner survey indicated that they would not be interested in developing housing on the second floor. While there is reluctance to develop second story housing among building owners, there seems to be an opportunity to study housing development where possible to encourage more foot traffic in the downtown area.

The answers to the question above reveals that location is an asset for downtown shopping, and that people shop downtown for other reasons not listed as specific responses. Forty-eight percent (48\%) of Longwood student respondents and $51.3 \%$ of Hampden-Sydney student respondents favor location as a reason to shop downtown. It is meaningful to note that visitors completing the consumer intercept surveys indicate that they choose to shop in downtown Farmville primarily because of selection and quality of merchandise.

The most frequent response across all demographics for shopping elsewhere in Farmville was "better hours," followed closely by "better price," "parking," and "selection."

What is your preferred time and day to do most of your shopping for non-grocery items?

Responses to this question were consistent across all demographics, and reiterate the importance of an option to shop after work or school for residents as well as college faculty/staff and students. The consumer intercept survey posed the question: "What would bring you downtown more often?" Top answers were "better store hours," "variety of dining," and "variety of other shops."

There were no significant differences in location of shopping, or reasons given for location, when comparing the responses of faculty, students, and residents. The exception would be health services, where a majority of students indicated that they shop outside of Farmville for these services, whereas, most faculty, staff, and residents shop within Farmville. This would be expected as students may travel to their hometown provider for routine health care services. Comparison by household income yielded no significant differences.

If you shop elsewhere for any of the goods and services mentioned above, where do you primarily go?

Comparison by demographics shows that students are more concerned with price across all categories, causing price to be the second most important factor in all categories. Filtering by income level, as income increases, focus migrates from price to selection and quality.

Restaurants are busiest in spring and fall months. Retail establishments, as expected, are busiest in November and December, followed by May.

How many customer transactions do you do per week during? (Mark ONE in each column)

|  | Busiest Months | Slowest Months |
| :--- | :---: | :---: |
| Less than 50 | $24.0 \%(6)$ | $76.0 \%(19)$ |
| $50-250$ | $59.0 \%(23)$ | $41.0 \%(16)$ |
| $250-500$ | $76.5 \%(13)$ | $23.5 \%(4)$ |
| Over 500 | $85.0 \%(17)$ | $15.0 \%(3)$ |

How important are the following consumer segments to your business? Gender:

|  | Very Important | Important | Not Important | Not Sure |
| :--- | :---: | :---: | :---: | :---: |
| Males | $69.8 \%(44)$ | $20.6 \%(13)$ | $6.3 \%(4)$ | $3.2 \%(2)$ |
| Females | $75.8 \%(50)$ | $13.6 \%(9)$ | $6.1 \%(4)$ | $4.5 \%(3)$ |

These findings were consistent across all types of business.

## Age:

|  | Very Important | Important | Not Important | Not Sure |
| :--- | :---: | :---: | :---: | :---: |
| Under 18 | $30.4 \%(17)$ | $23.2 \%(13)$ | $41.1 \%(23)$ | $5.4 \%(3)$ |
| $18-24$ | $49.1 \%(28)$ | $33.3 \%(19)$ | $17.5 \%(10)$ | $0.0 \%(0)$ |
| $24-44$ | $75.8 \%(47)$ | $21.0 \%(13)$ | $3.2 \%(2)$ | $0.0 \%(0)$ |
| $45-54$ | $81.0 \%(51)$ | $15.9 \%(10)$ | $3.2 \%(2)$ | $0.0 \%(0)$ |
| $55-64$ | $73.0 \%(46)$ | $20.6 \%(13)$ | $6.3 \%(4)$ | $0.0 \%(0)$ |
| Over 64 | $60.0 \%(33)$ | $25.5 \%(14)$ | $12.7 \%(7)$ | $1.8 \%(1)$ |

Approximately forty-one percent (40.7\%) (11) of retail respondents consider the $18-24$ year old segment very important to their business. Most retailers consider age ranges from $24-64$ as very important, with a concentration in the 45-54 age range.

## Income:

|  | Very Important | Important | Not Important | Not Sure |
| :--- | :---: | :---: | :---: | :---: |
| Low | $45.8 \%(27)$ | $25.4 \%(15)$ | $23.7 \%(14)$ | $5.1 \%(3)$ |

## Farmville

Retail Marketplace Profile

Data Note: Supply (retail sales) estimates sales to consumers by establishments. Sales to businesses are excluded. Demand (retail potential) estimates the expected amount spent by consumers at retail establishments. Supply and demand estimates are in current dollars. The Leakage/Surplus Factor presents a snapshot of retail opportunity. This is a measure of the relationship between supply and demand that ranges from +100 (total leakage) to -100 (total surplus). A positive value represents leakage' of retail opportunity outside the trade area. A negative value represents a surplus of retail sales, a market where customers are drawn in from outside the trade area. The Retail Gap represents the difference between Retail Potential and Retail Sales. Esri uses the North American Industry Classification System (NAICS) to classify businesses by their primary type of economic activity. Retail establishments are classified into 27 industry groups in the Retail Trade sector, as well as four industry groups within the Food Services \& Drinking Establishments subsector.

Consumer Survey Instrument

## Town of Farmville Consumer Survey

The Longwood University Small Business Development Center is conducting an independent, confidential survey of shoppers, residents, business owners, and students. This survey will only take 15 minutes of your time and will result in a market analysis of Farmville's shopping areas, including downtown. The project will provide information necessary to attract and expand businesses in our area! Tell us about the businesses you visit and the ideas you have for new businesses in Farmville, and you will be entered into a drawing for a $\$ 100$ VISA gift card! Please help us by completing and returning your survey in the enclosed postage-paid envelope.
